Subject: Guy Cave Work

Hello Mary Kay, I need to clarify that in regards to the BLP waste rock fill work being done at the Guy Caves, CH2M HILL was involved in the initial layout concepts, and also initial consultation on ideas for reconfiguring access up the road towards the Phil-Sheridan diversion. However, we were not involved in actual oversight or engineering evaluation on the specifics of what was done.

It has been brought to my attention that material was placed over the edge of the hill near the entrance to the caving area at a very steep angle. This was done without our review or comment. Our concern is potential for this material to slide or erode down the hill.
